

For Immediate Release

Rhozet Helped Deliver Video-On-Demand of Live Earth Concerts

Santa Clara, Calif. (July 10, 2007) – Rhozet Corporation’s Carbon Coder video transcoding solution was used by Los Angeles-based production company Incited Media to deliver video-on-demand presentation of last weekend’s Live Earth concert series. Concerts were held July 7, 2007 in Hamburg, Johannesburg, London, New York, Rio de Janeiro, Shanghai, Sydney and Tokyo, and through the around-the-clock efforts of Incited Media’s production team performances of more than 100 music artists, including Black Eyed Peas, Madonna, The Police and Kayne West, were available immediately to a worldwide audience at www.LiveEarth.MSN.com.

Incited Media was hired to provide webcast management services for Live Earth by Control Room, the leading global provider of live digital entertainment and the company in charge of producing the event. To help Incited Media bring on-demand viewing to people around the globe as soon as possible, the company used the Rhozet Carbon Server for immediate transcoding of concert footage. Incited Media used Rhozet’s Carbon Server to control a network of Carbon Coder transcoding nodes. This transcoding “farm” enabled Incited Media to create multiple video-on-demand files at the fastest possible speed. Incited Media production staff was on site at the event and will rapidly encode the live broadcast into high-quality Flash and Windows Media streams at a variety of data rates at over four times faster than real-time.

“Rhozet makes it possible for us to deliver the multiple format support and fast turnaround for on-demand viewing that live events on this scale require,” said Ben Rolling, co-founder of Incited Video. “VOD production that used to take a few days is now accomplished in a few hours with Rhozet’s Carbon technology.”

Live Earth used the global reach of music to engage people on a mass scale to combat climate crisis. Live Earth was a 24-hour, seven-continent concert series that brought together more than 100 music artists and two billion people to trigger a global movement to solve the climate crisis. Live Earth reached this worldwide audience through an unprecedented global media architecture covering all media platforms - TV, radio, Internet and wireless channels. Live Earth marks the beginning of a multi-year campaign led by the Alliance for Climate Protection, The Climate Group and other international organizations to drive individuals, corporations and governments to take action to solve global warming.

“We’re proud to have played even a small part in such an important worldwide event,” said David Trescot, CEO of Rhozet.

Rhozet’s Carbon Server manages any number of Carbon Coder transcoding engines to greatly accelerate the conversion of media from one format to another. Carbon Server allows for automated processing of high-volume transcoding tasks, managing job distribution, job prioritization, load balancing, FTP transfer, status monitoring, and job notification. All interaction with the server software is through an administrative Web interface that can be conveniently accessed from remote machines.
